

Architectural Cladding Suppliers

Strong, Modern, Non-Combustible Metal
Cladding and Roofing solutions.

Our Story

Welcome to the beating heart of cutting-edge metal cladding and roofing design and fabrication! At Architectural Cladding Suppliers (ACS), our team redefines the boundaries of architectural excellence, offering a captivating fusion of form and function.

Along with our sister company PPC Flashings, we have been supporting Installers, Architects, Builders, and Developers with our metal cladding, walling, and roofing solutions. Architectural Cladding Suppliers fabricate and supply high-quality, non-combustible metal cladding and roofing products, along with value-added services and technical support to keep your projects running smoothly and on time.

Our combined knowledge from experienced technicians, tradesmen, roofing, walling, cladding and plumbing specialists, and architectural estimators, allows ACS to offer unparalleled cladding project support from concept to completion.

From urban landmarks to avant-garde marvels, each project is a testament to our unwavering dedication to shaping spaces that leave a lasting imprint.

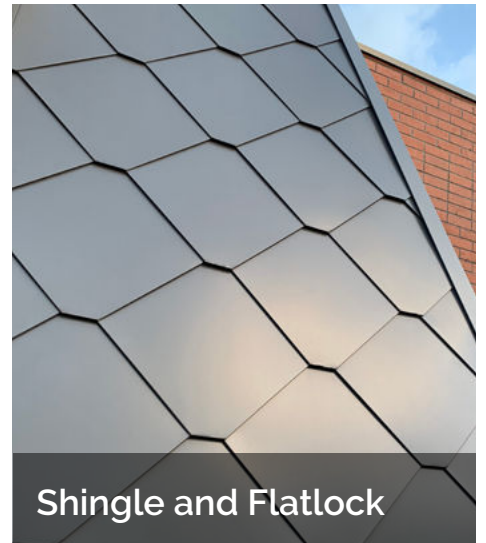

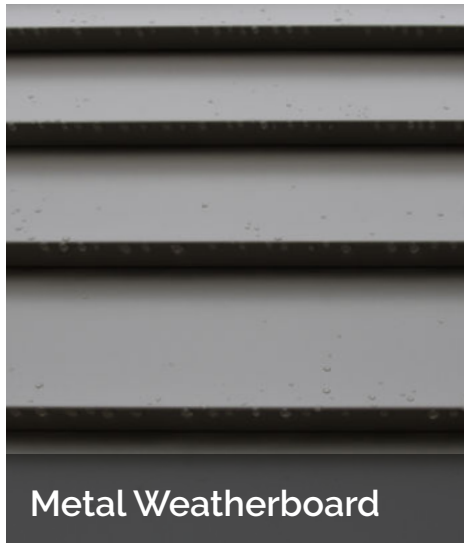

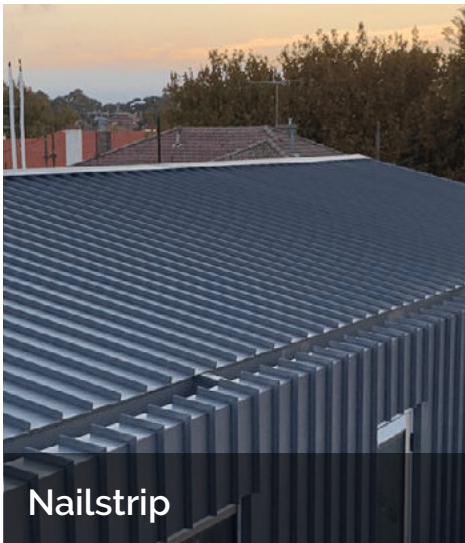

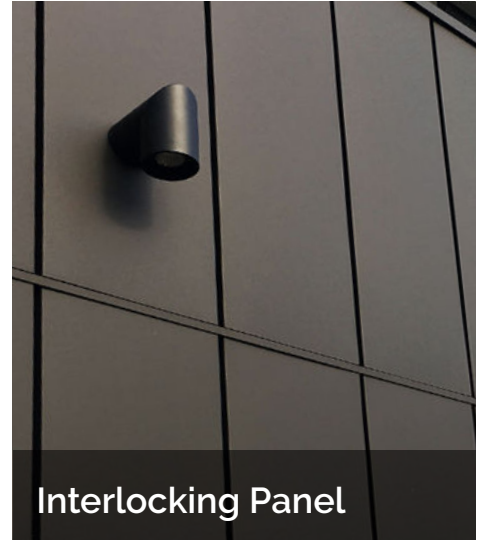

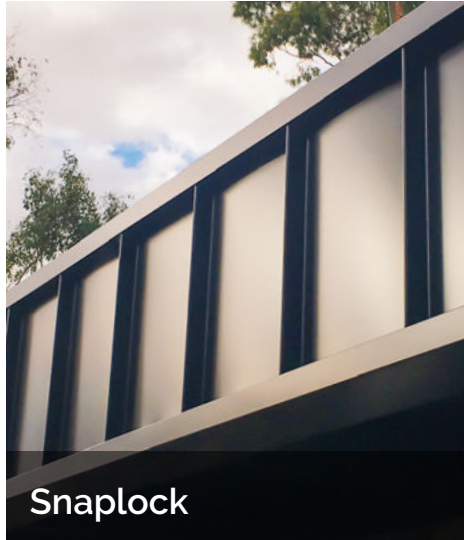

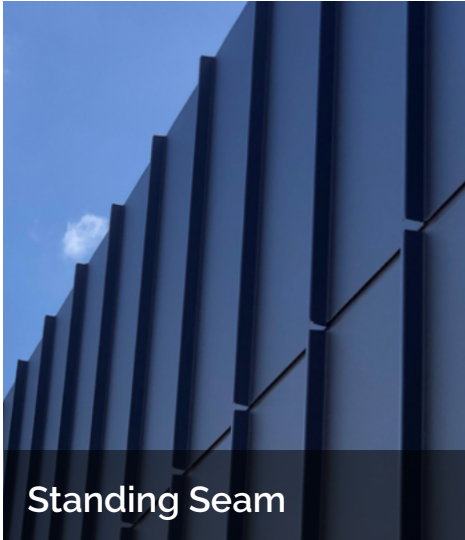

Architectural Cladding Suppliers is dedicated to achieving the highest quality in manufacturing, using state-of-the-art machinery and employing highly skilled technicians who have been working in the industry for decades.

We are passionate about making architectural metal walling, cladding, and roofing products that will not only look great, but also be safe for the people living and working in the buildings, and great for the environment.

Our fit-for-purpose metal cladding and roofing products provide you with the finish, quality, and reliability to keep your projects running on time and within budget. We have the supply connections and solutions to service your building project needs from start to finish.

We are justifiably proud of our track record as we look to the future.

Products

Our continued investment in the latest machinery is demonstrated by our product quality, finish and service delivery. Our people, plant and machinery are dedicated to our customers and the key projects they undertake.

Architectural Cladding Suppliers respond quickly to meet urgent project deliveries and alleviate any issues that arise in project management. Utilisation of walling, cladding and roofing materials to reduce waste and increase efficiencies is the key to building affordable and sustainable buildings. This is proven in our project work and the testimony of our customers speaks for itself.

Our Mission

To provide first class customer service built on our capabilities and dedication to innovation.

Our Partners

These reputable partners are our only choice for quality manufacturers of our core finishes to provide you with the style, look and feel you will be proud of.

Colorbond®

Wall cladding and roofing products made from COLORBOND® steel deliver a beautiful design option for an exterior façade or as an internal feature walling to match any mood or environment.

elZinc®

Made of zinc with a minimum initial purity of 99.995%, elZinc America's sheet and coil are characterised by high malleability in any rolling direction and high stability after forming.

Aurubis

Aurubis Copper is a beautiful, durable and timeless material. It has a long lifecycle when correctly supplied and installed. Being a natural material, copper compliments other materials.

RHEINZINK®

RHEINZINK® Titanium Zinc is manufactured to the highest of standards, providing a natural finish that ages with time, is maintenance-free and 100% recyclable. If you're looking for a durable and innovative finish, look no further.

VMZINC

VMZINC® provides the freedom to create architectural masterpieces which are difficult to realise with other construction materials. The flexibility and versatility of VMZINC® makes it the perfect material for innovative building projects.

UniCote®

UniCote® is a luxury pre-painted steel product designed to suit Australian high-end Architecture. The key benefits comprise: Fire Resistance, Scratch Resistance, QUV Resistance, Impact Resistance, and Humidity Resistance.

MagnaFlow™

MagnaFlow takes standard zinc/aluminium alloy-coated steel substrate to the next level with the addition of magnesium. This enables the zinc to 'flow', which seals the cut edges, preventing exposure to premature corrosion.

ColorCote®
The right roof always lasts longer

ColorCote® is highly durable and designed for excellent colour retention and formability. It's the 'formability' or innate ability to be easily re-formed that will offer you profile options to suit your overall design aesthetic, and all at an incredibly affordable price.

PREFA

PREFA Aluminium – PREFALZ® withstands external influences and stresses and is UV-resistant, colour-fast and weatherproof. At the same time, it is an unbelievably lightweight and stable material, offering a wide range of planning and design possibilities.
